## DETAILED ACTION

### *Election/Restrictions*

1. Applicant's election of Invention of Embodiment I, Claims 1 and 3, in the reply filed on 12/27/04 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Applicant's election without traverse of Invention of Embodiment I, Claims 1 and 3, in the reply filed on 12/27/04 is acknowledged.

Claims 2 and 4-6 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Invention, there being no allowable generic or linking claim.

Election was made **without** traverse in the reply filed on 12/27/04.

### *Specification*

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2811

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Noguchi et al. (PN 6,483,176).

Noguchi et al. discloses, as shown in Figures 1-4, a plurality of semiconductor elements, each semiconductor elements having first and second main electrodes (7,7) and control electrode (8);

a semiconductor substrate (10) having a first principal plane on which the first and second main electrodes and the control electrode are located;

a film (13) over the first main electrode and the control electrode, insulating the first main electrode and the control electrode from the second main electrode, and is made of a polymer with a low dielectric constant (Col. 19, lines 24-32);

a chip surface electrode (3) over the film and the second main electrode and connected to a ground potential, wherein the second main electrode is provide with the ground potential through the chip surface electrode (see Figures 1-4).

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Noguchi et al. (PN 6,483,176) in view of Zhao (PN 6,071,809).

Noguchi et al. discloses the claimed invention including the semiconductor device as recited in the rejection above. Noguchi et al. further discloses the semiconductor substrate is made of

Art Unit: 2811

silicon. Noguchi et al. does not disclose the semiconductor substrate is one of SiC and sapphire. However, Zhao discloses a semiconductor substrate (302) is one of silicon, SiC and sapphire, etc. Note Figures 3L and 5-6 and Col. 5, lines 11-24. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to form the semiconductor substrate of Noguchi et al. being one of SiC and sapphire, such as taught by Zhao because silicon, SiC and sapphire are commonly used as the semiconductor substrate and they are interchangeable.
